

Intraoral photographic mirrors with stainless steel handle

Function :

With some mirrors fingers may appear on the picture when not properly handled. For the buccal side the mirror is used as a retractor and needs a good grip to have a good strength. That is the reason why these mirrors have a shoe stuck on the back side to attach a stainless steel handle. Our mirrors are made of 3mm float glass chromium coated on a single side. They are stainless and ensure a high quality reflectance without « ghost image ».

“Titanium Mirrors” are available with an additional Titanium dioxide coat for a higher reflectance than either chromium or rhodium.

User tips :

Mirror will be introduced into the buccal cavity and positioned to take the picture directly on the mirror. The mirror shape will be chosen according to the photography area. Handle will help to hold the mirror by the practitioner, the assistant or the patient if he is cooperative.

Warming up the mirror will prevent fogging (40°C, 104°F), blowing with air syringe can be used too.

Cleaning :

Mirrors are scratches sensitive: Handle and store the mirrors carefully and do not mix with metallic instruments.

Very important : Spotted mirror must be kept moist until washing by immersion in water or kept between 2 damp wipes.

Do not wash with washing machine or ultrasonic cleaning device.

Clean with water or a soft cloth or microfiber. It is possible to use decontamination products keeping the same precautions.

Sterilization :

Autoclaving is the recommended method of sterilization to 121° (249.8°F) or 134° (273.2°F) for 30 minutes max.). Mirrors must be absolutely dry when placed in pouches.

Other process are not recommended.

SECURITY :

Any scratched mirror or/and with a chipped edge must be immediately discarded.

SECURITY :

Any scratched mirror or/and with a chipped edge must be immediately discarded.

Exemples of use of Intraoral photographic mirrors with stainless steel handle

You can increase friction by folding slightly the friction tongue with a pen.
